8. Experiment: User Management & RBAC in Zoho Creator

Aim:

To configure granular User Management and Role-Based Access Control (RBAC) within the **Patient Appointment Booking** application in Zoho Creator to secure modules, restrict medical data visibility, and assign designated operational roles for healthcare management.

Workflow:

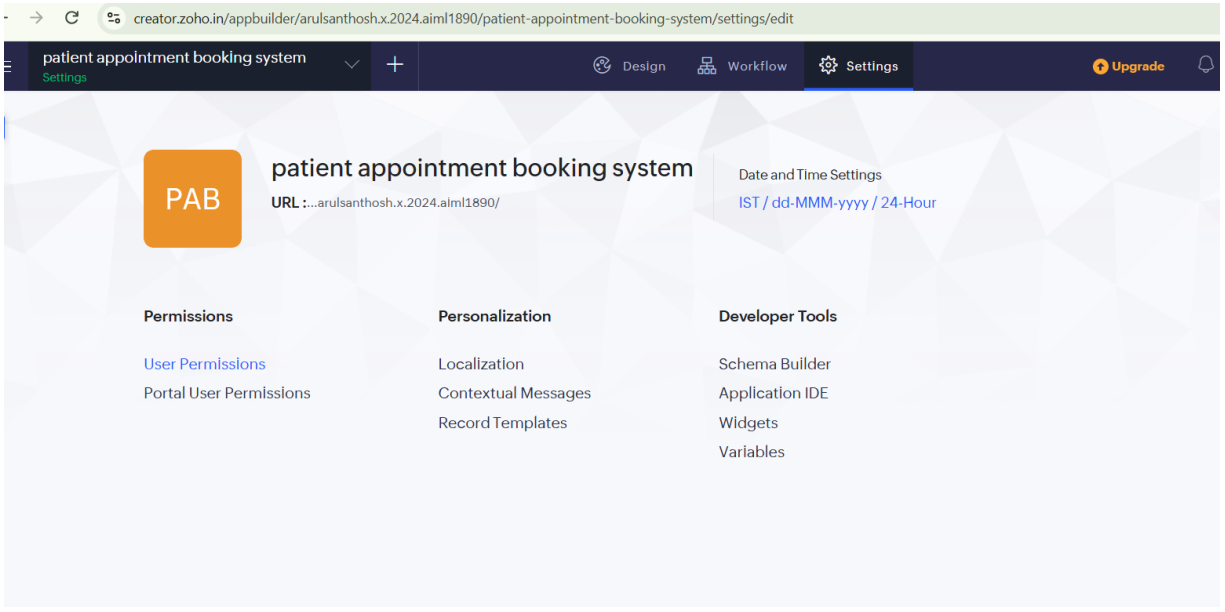

Role-Based Access Control restricts system access based on the organizational role of a user. In this lab, we configure the Patient Appointment Booking enterprise application in Zoho Creator featuring three distinct user tiers:

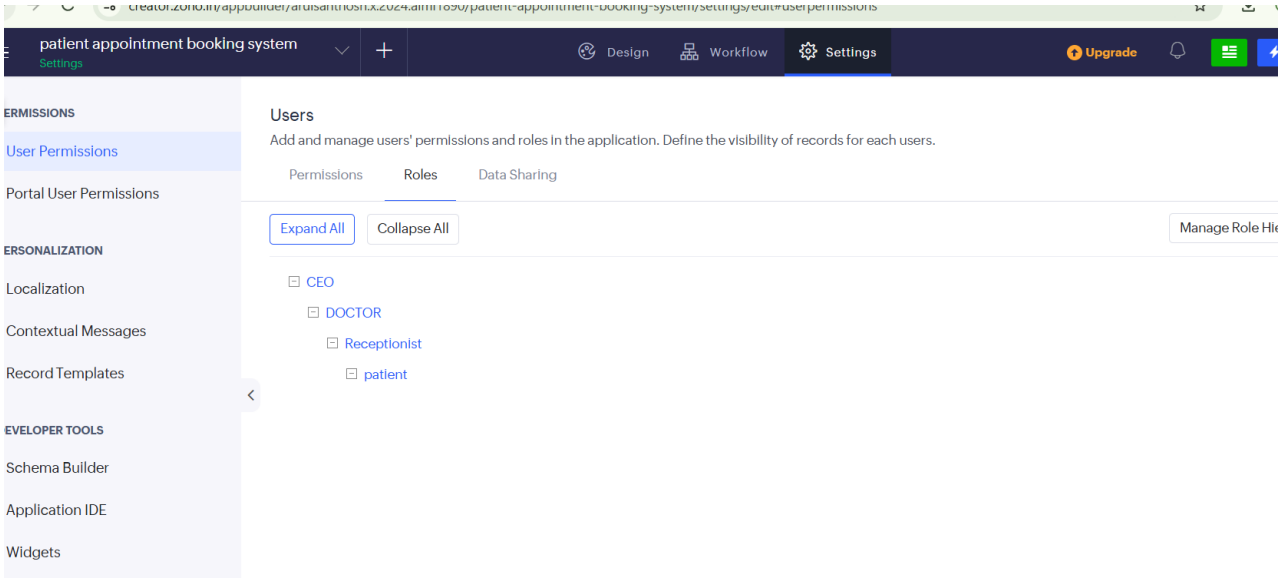

Role Name	Assigned Permissions	Data Access Scope
Hospital Administrator	Full Create, Read, Update, Delete (CRUD)	All appointment & patient records across hospital
Doctor / Department Manager	Read, Update, Approve Appointments	Assigned Specialization / Department records
Front Desk / Reception Staff	Create & Read own submissions	Only patient records registered by self

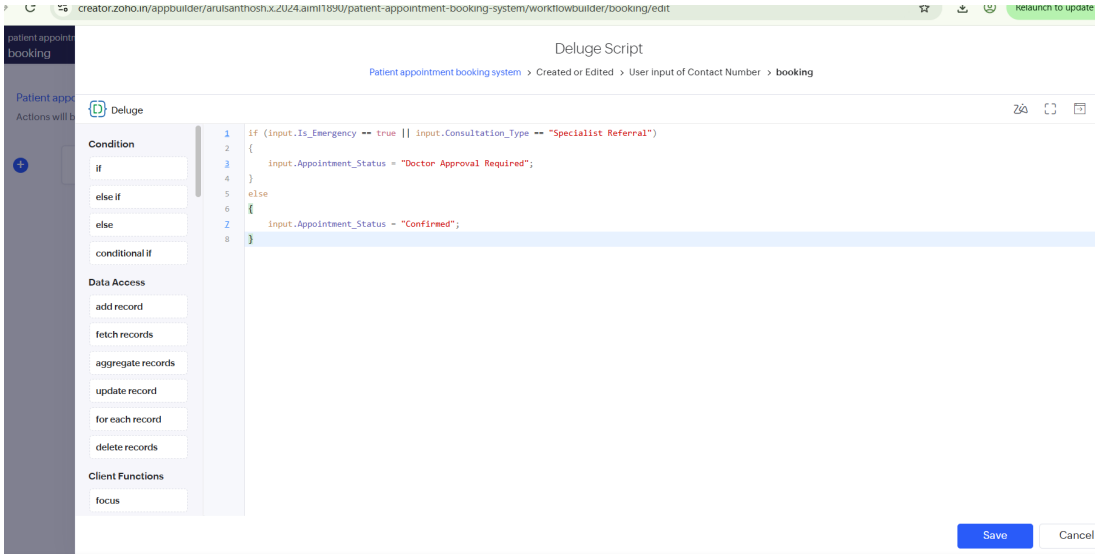

Procedure:

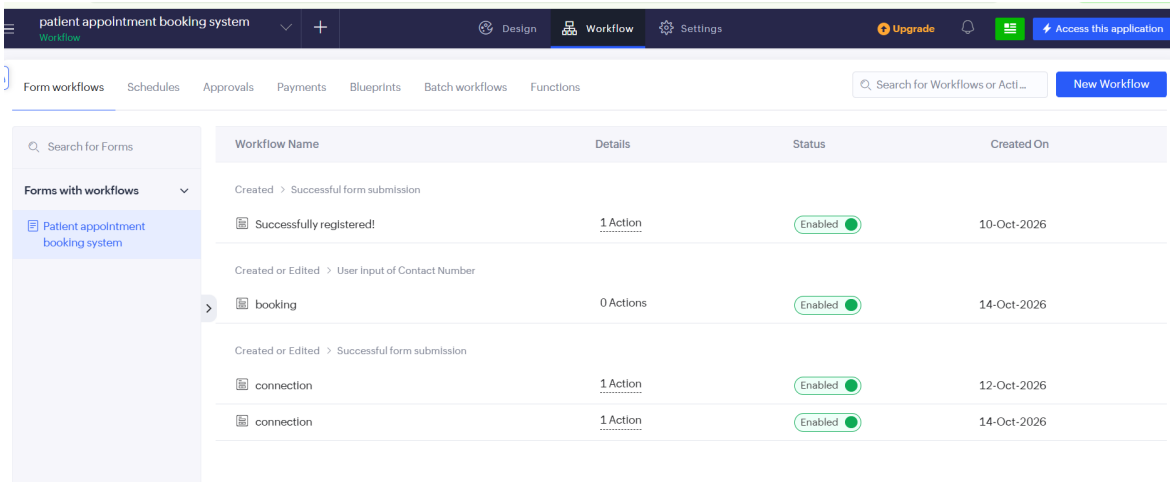

1. **Access Developer Mode:** Log into Zoho Creator, open your *Patient Appointment Booking* application, and navigate to the **Settings** tab in the left-hand builder menu.
2. **Configure Users & Roles:** Click on **Users & Permissions** under the Users section. Select the **Roles** sub-tab and create custom roles (e.g., Doctor, Receptionist) alongside the default Administrator role. Establish hierarchy reporting lines if required.
3. **Define Profiles & Permissions:** Navigate to **Profiles** to fine-tune module-level permissions (Appointment Form creation, Schedule Report viewing, Edit/Cancel rights).

Screenshots:

Result:

User management and RBAC rules were successfully configured and tested in Zoho Creator for the **Patient Appointment Booking** system, ensuring robust application security, patient data isolation, and structured multi-user workflow execution.
